

Website Audit Report

<https://dominickkubica.github.io/>

Generated: 2026-09-30 14:24

Pages crawled: 1

Automated technical audit covering performance, real-world Core Web Vitals, SEO, page structure, mobile/UX, booking & conversion setup, analytics tracking, and passive security hygiene. Findings are based on a rate-limited crawl of publicly accessible pages and should be used as a prioritized starting point, not an exhaustive guarantee.

Fix These First

The best-value fixes: high impact, low-to-moderate effort

1. Broken external link: <https://executecoaching.org/> (request failed / timed out)

Medium impact - Quick fix - 1 page(s) affected

The link to 'https://executecoaching.org/' failed (request failed / timed out).

Best fix: Update the link to the correct current URL.

2. Broken external link: <https://www.linkedin.com/in/dominick-kubica> (HTTP 999)

Medium impact - Quick fix - 1 page(s) affected

The link to 'https://www.linkedin.com/in/dominick-kubica' failed (HTTP 999).

Best fix: Update the link to the correct current URL.

3. No clear call-to-action detected on homepage

Medium impact - Moderate fix - 1 page(s) affected

The homepage has no button/link text matching common CTA phrasing (e.g.

Best fix: Add a prominent, above-the-fold CTA button in the hero section (e.g. 'Book a Class').

4. Missing recommended security headers

Medium impact - Moderate fix - 1 page(s) affected

The site is missing: X-Content-Type-Options, X-Frame-Options, CSP.

Best fix: Add missing headers via a security plugin (Really Simple SSL, Wordfence) or host/CDN config (e.g. Cloudflare).

Estimated time to address every finding in this report: ~2-5 hours (a rough scoping estimate for someone familiar with the WordPress/Elementor stack - see the Impact x Effort matrix on the next page for the full breakdown).

Executive Summary

Total issue instances found: 6

Distinct issue types: 6

By Severity

- High: 0
- Medium: 4
- Low: 2

By Category

- SEO: 2
- Structure: 1
- Booking/Conversion: 1
- Tracking: 1
- Security: 1

Impact x Effort Matrix

(counts are distinct issue types found, not per-page instances)

	Quick Fix	Involved
High Impact	2	2
Low Impact	1	1

Estimated time to address every finding: ~2-5 hours total, based on effort tags per issue type. Useful as a rough scope for a fix-it engagement, not a firm quote.

Core Web Vitals by Page

Google PageSpeed Insights data could not be retrieved this run - the free, unauthenticated API tier was rate-limited/quota-exceeded after only a handful of requests.

To get real Core Web Vitals data on the next run:

1. Register a free key at developers.google.com/speed/docs/insights/v5/get-started
2. Set it as the PAGESPEED_API_KEY environment variable before running audit.py
3. Re-run - results are cached for 7 days, so repeat runs stay fast.

Detailed Findings

MEDIUM

[Moderate]

Booking/Conversion

1. No clear call-to-action detected on homepage

Page(s): <https://dominickkubica.github.io/>

Why it matters:

The homepage has no button/link text matching common CTA phrasing (e.g. 'Book Now', 'Sign Up', 'Get Started'). The homepage is typically the highest-traffic page and needs an unmistakable next step for visitors.

Possible solutions:

- Add a prominent, above-the-fold CTA button in the hero section (e.g. 'Book a Class').
- A/B test CTA wording and placement once one is in place.
- Make sure the CTA button style visually contrasts with the rest of the page.

MEDIUM

[Quick]

SEO

2. Broken external link: <https://executecoaching.org/> (request failed / timed out)

Page(s): <https://dominickkubica.github.io/>

Why it matters:

The link to '<https://executecoaching.org/>' failed (request failed / timed out). Broken links hurt user trust, waste crawl budget, and (for internal links) can orphan pages.

Possible solutions:

- Update the link to the correct current URL.
- Remove the link if the destination page/resource no longer exists.
- If internal, set up a 301 redirect from the old path to a valid page.

MEDIUM

[Quick]

SEO

3. Broken external link: <https://www.linkedin.com/in/dominick-kubica> (HTTP 999)

Page(s): <https://dominickkubica.github.io/>

Why it matters:

The link to '<https://www.linkedin.com/in/dominick-kubica>' failed (HTTP 999). Broken links hurt user trust, waste crawl budget, and (for internal links) can orphan pages.

Possible solutions:

- Update the link to the correct current URL.
- Remove the link if the destination page/resource no longer exists.
- If internal, set up a 301 redirect from the old path to a valid page.

MEDIUM

[Moderate]

Security

4. Missing recommended security headers

Page(s): <https://dominickkubica.github.io/> (X-Content-Type-Options, X-Frame-Options, CSP)

Why it matters:

The site is missing: X-Content-Type-Options, X-Frame-Options, CSP. These headers are defense-in-depth measures against clickjacking, MIME-sniffing, and content injection - they don't fix a specific vulnerability but are considered

baseline hygiene.

Possible solutions:

- Add missing headers via a security plugin (Really Simple SSL, Wordfence) or host/CDN config (e.g. Cloudflare).
- Start with X-Content-Type-Options and X-Frame-Options (low risk of breaking anything); test Content-Security-Policy carefully since a strict policy can break embedded widgets/scripts if misconfigured.

LOW	[Quick]	Structure
-----	---------	-----------

5. Moderate inline/embedded style bloat (4-8KB of CSS text)

Page(s): <https://dominickkubica.github.io/> (~5KB)

Why it matters:

A moderate amount of inline/embedded CSS text adds unnecessary HTML weight.

Possible solutions:

- Enable external CSS file generation in Elementor's performance settings.
- Periodically regenerate Elementor CSS via Elementor > Tools.

LOW	[Moderate]	Tracking
-----	------------	----------

6. No Google Tag Manager or GA4 detected

Page(s): <https://dominickkubica.github.io/>

Why it matters:

'<https://dominickkubica.github.io/>' shows no sign of Google Tag Manager or direct GA4 tracking. Without analytics, conversion and traffic data for this page cannot be measured.

Possible solutions:

- Install Google Tag Manager site-wide via a plugin (Site Kit, GTM4WP) rather than theme edits.
- Configure GA4 as a tag inside GTM rather than hardcoding it.
